Situated between buildings 2613 and 2627, this building was erected in 1944 as a "Mobilization," "Semi-Permanent" structure. Its various titles indicate uses not clearly related to the hospital zone in which the building was constructed. Apparently, the building's use changed from time to time over the years. It is best known as an aerial delivery facility.

Building 2618 is rectangular in plan, measuring 25 feet-4 inches by 126 feet-2 inches except for a small, 7-foot-5-inch-by-9-foot-7-inch offset. The foundation and floor are concrete. The superstructure is of wood frame design with a gabled roof and composition shingles. Fenestration consists of a large number of 8/8 windows down the long walls and end walls. The siding is horizontal wood drop-lap. On the roof are three louvered vents.

Containing 3,331 square feet and built at a cost of \$6,000, the building has had along its south side another long, frame building which extended eastward to the front of building 2627. The latter is a later addition and does not appear on any of the early maps. We find no number or designation for it. Building 2618 appears to be in a good state of repair.
